

AI Plant Observation Playbook

Turn scattered photos and readings into clear records you can confidently review with AI.

A practical field manual for home growers and small craft cultivators in legal markets.

Illustrative botanical scene. Equipment and app access are separate.

Capture

Overview + detail

Record

Time + context

Organize

One limited task

Review

Check + save

01. Choose one visible question

Example: Is the pale area visible in both photographs? Use a neutral subject ID such as P01. You can begin with a phone and a notebook.

02. Save the originals

Take an overview and detail of the same subject. Keep the original files. Record the date, time, lighting and filenames.

03. Use one prompt

Choose Prompt 1 on page 13. Attach the actual images to an image-capable tool. A filename alone does not let a text-only tool inspect a photograph.

04. Make the answer yours

Check each claim against the source. Correct unsupported statements. Save the prompt, original response and reviewed note separately.

FINISH LINE

You have a source photo pair, a small record and a reviewed note with any remaining unknowns. Use workbook pages 3 and 6 to complete the task.

A finished record you can reuse

Illustrative example. This is a recording format, not an environmental recommendation or a diagnosis.

Subject / session	P01 / P01_2026-10-04_0915
Question	Is the pale area visible in both photos?
Original files	P01_overview.jpg + P01_detail-A.jpg
Display record	22.4 degrees C / Monitor-A / desk / settling unknown
Photo context	Window light; handheld; overview detail too small
Reviewed note	Pale area visible in detail. Overview confirmation and cause unknown.
Next evidence	A matching overview and detail with readable features in even light.

WHY THIS IS USEFUL

Another reader can find the original files, see what you checked and understand the limits. A polished paragraph without those links is harder to trust.

01 / Describe only what is visible

When to use it

When a photo pair needs a neutral description.

EXAMPLE INPUT

Subject P01. Question: is a pale area visible in both photos? Overview: the feature is too small to resolve. Detail: a light patch appears near a leaf edge. Light: uneven window light. Cause: unknown.

Copy-ready prompt

Review the attached overview and detail images. Describe visible features only. Return four headings: Visible detail, Image limitations, What cannot be concluded, Next evidence to collect. Refer to each image by filename. If a feature is unreadable, say so. Do not diagnose, infer a cause or recommend treatments. Distinguish what is visible from what is uncertain.

Add your own evidence

Replace bracketed text with your own notes. For photo tasks, attach the actual images. Keep original filenames and record any limitation. This example is illustrative, not a real customer case.
