REUSE

Your next record

For adult home growers and craft cultivators in legal markets. Practical observation and responsible AI use.
Equipment and app access are separate.

Scout Camera / prepare and capture

1

Prepare

Read manual

2

Capture

Overview + detail

3

Record

Lens + filenames

4

Check

Focus + context

Prepare

Confirm attachment compatibility with your phone or camera. Inspect the attachment and keep surfaces clean using the method in the manual. Fit it without forcing it or obstructing unrelated phone components.

Capture

Save an overview that locates the feature. Use the attachment for a readable detail when appropriate. Work from a steady position and even light. Keep the original files.

Record

Write the phone/camera ID, attachment used, view, lighting and filenames. Link the detail to the same subject and session as the overview.

TRY IT / TWO FILES, ONE SUBJECT

Save an overview and detail. Check that both show the feature named in your question. Write: same subject confirmed or subject match unknown. Magnification alone does not prove better evidence.

Environment Monitor / one clear reading

Value + unit + context

Copy the display. Preserve unknowns. Check the manual.

Generic schematic, not a model-specific product drawing.

Prepare

Check supported modes, power, placement and operating limits in the supplied manual.

Read and record

Copy the displayed value and unit exactly. Add the time, device ID and position. Note recent movement or a settling status that has not been confirmed.

Illustrative display	22.4 degrees C
Device / position	Monitor-A / desk
Time / context	09:15 local; moved before session
Limitation	Settling and calibration status unknown

Check and troubleshoot

Check the unit and mode before saving. If a value is unreadable or unexpected, preserve the original record and consult the manual rather than guessing a correction.

TRY IT / SPOT THE MISSING CONTEXT

A note says 22.4 without a unit. Add a percent sign? No. Preserve the value and write unit unknown until the source confirms it. A display does not prove accuracy or safe conditions.

Completed example / your reference

Illustrative record. Values demonstrate documentation only.

subject_id / session_id	P01 / P01_2026-10-04_0915
date / time	2026-10-04 / 09:15
question	Is the pale area visible in both photos?
overview_file / detail_file	P01_overview.jpg / P01_detail-A.jpg
reading / unit / device_id	22.4 / degrees C / Monitor-A
position / settling_status	desk / unknown
limitations	Uneven light; handheld photo; settling unknown
reviewed_note	Area visible in detail; overview too small to confirm
next_evidence	Matching overview and detail in even light
